

Introducing the

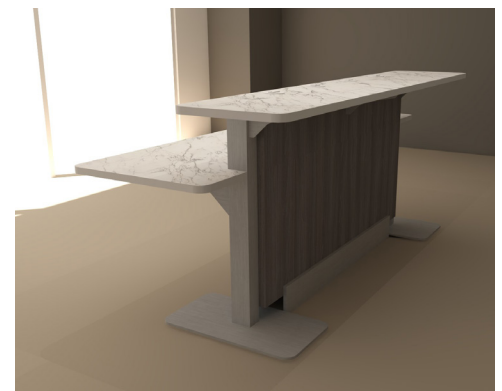

Med Team Desk

Modern medical and surgical environments are recognizing the value of open team areas where physicians and providers huddle to exchange information, order meds and supplies, and update charts before returning to patients. This reduces the need for more offices and facilitates greater communication.

r.o.i. Design has designed many of these open team areas and, eventually, we created a custom desk to fit the needs of these spaces. Working with qualified media furniture makers in Michigan, we have engineered this desk and are now making it available throughout the state.

The desk is a custom product and can be sized to fit your office. Several standard features are included:

- Two fixed-height surfaces, seated and standing
- Built-in data, power, and USB receptacles
- Complete wire management
- Powder-coated legs and hardware
- Standard laminates available for top and front panels
- Top edges are finished with PVC and radius corners
- Optional, removable partitions to mitigate the spread of bacteria and viruses while working in close quarters
- Up to 144" in length

Prices start at \$3,500, depending on size, power accessories, and installation conditions. (taxes excluded). We will custom design your desks for free, including coordinating power accessories with your technical needs.
